SCUDATA esProc Desktop v20260507 for Win x64

2026-06-02 11:53:37

SCUDATA esProc Desktop is a desktop app that simplifies data analysis and processing for all, including non-programmers. It also allows cleaning, transforming, and simply analyzing data by using the data stored in Excel, CSV, JSON, and so on. Rather than having to write complex code or learn how to push the boundaries of spreadsheets, you can do more complex computations with a simple scripting language and a streamlined graphical interface.

SCUDATA esProc Desktop provides flexibility and interactivity unlike Excel, which becomes cumbersome and cumbersome in large or complex tasks, and BI software, which only allows fixed and pre-set analysis. You do not have to know such a complex programming language as Python or SQL to perform some powerful calculations. It is cross-platform and can be used on the desktop, making batch operations fast and painless.

Using **SCUDATA esProc Desktop**, you can combine, partition, filter, group, rank, and manipulate your data in any number of ways. Answer: esProc allows you to analyze and clean messy data, as well as to prepare files to be used again, much easier, and in a much shorter time, unlike business reports. It is useful, effective, and efficient for people working with organized data regularly.

Key Features of **SCUDATA esProc Desktop** :

1. **Table Processing** – Merge or split tables, remove duplicates, append new data, or create summaries easily.
2. **Set Operations** – Perform union, intersection, and difference checks, or test whether data belongs to a set.
3. **Grouping & Aggregation** – Group rows by intervals, categories, or patterns, then calculate totals or text combinations.
4. **Data Expansion & Filling** – Generate sequences, split text/rows, fill missing values, or insert blank rows at intervals.
5. **Search & Filter** – Quickly locate data, pick first/last values, select top/bottom N items, or find min/max.
6. **Duplicate Handling** – Identify, count, and remove duplicates while keeping original order when needed.
7. **Data Association & Comparison** – Link tables together, use ranges for associations, or match multiple rows.
8. **Text & Date Operations** – Extract numbers/dates, split text into words, calculate overlapping times, or generate calendars.
9. **Cumulative & Category Calculations** – Add running totals, calculate within groups, or expand summaries into details.
10. **Sorting & Ranking** – Order data precisely, rank within categories, or group results by rank.
11. **Row/Column Conversion** – Switch between rows and columns, create cross tables, or reorganize categories.
12. **File Extraction & Generation** – Pull data from messy spreadsheets, extract specific cells, and create neat card-style reports.
