IntraWeb

TMS IntraWeb iPhone Controls package Place of IntraWeb elements to make web applications for mobile devices such as iPhone, iPad, Android that provide a look & feel quite near-native software.

Being designed as a method of building strong web applications that may operate on mobile devices, TMS IntraWeb iPhone Controls Bundle suggests a wide selection of IntraWeb elements that should cater to any programmer's needs. All the more so since it provides support not just for iOS handsets but also Android mobiles and guarantees almost native appearances for your applications.

Up to 20 distinct elements lie in the heart of the TMS IntraWeb iPhone Controls Package. Because of the shortage of space, we will not have the ability to share all of them, but in-depth documentation can be found on the developer's site.

TTIWIPhonePopup should be convenient if you want to emulate the popup controller found in iPhones and iPad, whereas TTIWIPhoneEdit was made to replicate the famed curved corners, among other items. TTIWIPhoneSpinner suggests a simple solution for wheel management when it has to do with the time and date selector.
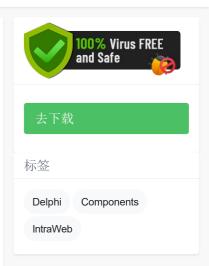

Afterward, as made evident by its own name, TTIQIPhoneMenu will help you work with app menu management whilst TTIWIPhoneGeolocation can regaining a particular place and translating it into longitude and latitude coordinates or street address.

TTIWIPhoneList can help you select between a configuration and a typical list style and promises the ideal iPhone emulation. TTIWIPhoneButton allows you to produce switches whose corners are curved in pristine iPhone style, and TTIWIPhoneRegion suggests a seamless manner of customizing time settings.

TMS IntraWeb iPhone Controls Bundle Great Attributes:

The TMS IntraWeb iPhone Controls Package was designed for and tested by iPhone, iPod Touch, iPad, Android. Please notice that the TMS IntraWeb iPhone Controls Pack isn't meant to be utilized in shared desktop browsers such as Internet Explorer, Firefox, Chrome, Safari,...

- Edit in iPhone design with curved corners
- Total WebKit established representation, no images utilized
- Configurable actions button
- Configurable keyboard kind
- Asynchronous occasions & client-side occasions

- Web execution of this indigenous iOS date/time selector wheel controller
- Asynchronous updates & events
- Complete WebKit / HTML5 established representation, no images utilized
- Configurable Assortment of slots
- Constructed time and date selector
- Smooth iPhone fashion scrolling

- iPhone / iPad fashion popup controller
- Asynchronous updates & events
- Total WebKit predicated representation, no images utilized
- Built-in configurable Selection of iPhone / iPad design buttons
- Can host custom articles by adding a place that may contain any controller
- Extensive control over placement

TTIWIPhonePhoneLabel

- Tag beginning iPhone dialer program with predefined telephone number

TTIWIPhoneEmailLabel

- Label beginning iPhone email program with predefined optional and email classified theme, body text, CC email, and BCC email

TTIWIPhoneSMSLabel

- Tag beginning iPhone SMS program with predefined telephone number

TTIWIPhoneLocationLabel

- Label beginning iPhone maps program with the adjoining place and discretionary destination

TTIWIPhoneHeader

- iPhone program header controller
- Asynchronous upgrades, asynchronous events
- Optional button left & right with text or picture
- Optional arrow contour back
- No graphics used for producing
- Clientside events for button clicks

- iPhone program footer controller
- Optional graphic element left & right
- Asynchronous updates, asynchronous events

- iPhone application menu control
- Collection of menu items with text
- iPhone style status indicator per item
- Asynchronous updates, asynchronous events
- Client-side Javascript events

- iPhone style list control
- Supports standard list mode & settings mode
- In settings mode, You can organize items in sections
- Image, value, caption, and notes per item
- Smooth iPhone style scrolling & scroll indicator
- Asynchronous updates, asynchronous events
- Asynchronously inserting and removing items
- Can show detail in connection with TIWiPhonePageFlip
- No images used for rendering
- Extensive control over appearance: colors, margin, font
- Standard iPhone look & feel colors
- Client-event for item clicks

- The non-visual component to retrieve the current geographic location
- Retrieve location for a street address or as latitude/longitude coordinates
- Works asynchronously

- Webkit based transition between regions
- Client-side transition, asynchronous updates
- Different transition types configuration

- On/off toggle button in iPhone style with rounded corners
- Animation when toggling, say
- Three built-in styles: normal, system, custom
- States can be represented by text
- Asynchronous updates, asynchronous events
- No images used for rendering

- Button in iPhone style with rounded corners
- Asynchronous events & client-side occasions
- Optionally add the image in the button

- iPhone design trackbar
- Asynchronous updates & asynchronous track events
- Complete WebKit based rendering, no pictures
