DayPilot Pro for JavaScript v2020.4.4766 (15 Nov 2020)

2024-12-28 23:45:13

Client-side JavaScript library of scheduling net elements using support for vanilla JavaScript, jQuery, AngularJS 1.x, and Angular 2+. You may use it with almost any server-side backend (PHP, ASP.NET, Java, NodeJS as well as others).

JavaScript Scheduler: DayPilot Scheduler shows a timeline for numerous sources. It can be changed to a Gantt style (just one event/task per row). Supports AJAX and HTML5. Contains a jQuery plugin.

The **JavaScript Scheduler** is a visual HTML5 element that reveals a timeline perspective for numerous sources. The timing is displayed on the horizontal (X) axis and tools are displayed as rows (about the vertical axis).

The **behavior** of the Scheduler part could be customized with a rich JavaScript API.

You can personalize the **look** of this JavaScript Scheduler utilizing CSS. There are lots of CSS themes contained in the download bundle. You can also design your own

To immediately **research** the fundamental configuration options you may use the internet UI Builder configurator. It will permit you to find the configuration changes in a preview. You could even create and download a job together with the chosen settings. This way it is possible to begin your proof-of-concept execution in moments.

JavaScript Gantt: Gantt Chart shows a deadline with each activity on another line. Supports drag and drop operations, HTML5, CSS3 styling, jQuery plugin.

This **JavaScript/HTML5 Gantt graph** widget lets you show a hierarchy of jobs in a deadline perspective, 1 item per row.

JavaScript Event Calendar: DayPilot Calendar shows a weekly and daily event calendar. Supports AJAX and HTML5. Contains a jQuery plugin.

JavaScript Monthly Calendar: DayPilot Month shows a monthly event calendar. Supports AJAX and HTML5. Contains a jQuery plugin.

Online Configurator: Produce a Fast proof of concept using DayPilot UI Builder. It is possible to take advantage of this **visual tool to automatically configure the part look and properties** and create a downloadable job (JavaScript, Angular, and Vue.js supported).
