IronQR for .Net is a premier C# QR Code library designed to meet the demands of accuracy, ease of use, and speed. Whether generating, reading, or styling QR codes, IronQR offers a comprehensive solution for .NET developers. Its intuitive API allows seamless integration into .NET projects, providing Barcode functionality in minutes.

With **IronQR for .Net**, developers can effortlessly work with QR codes across various platforms and environments. It fully supports .NET Core, .NET Standard, and .NET Framework, ensuring compatibility with web, mobile, desktop, and console applications. Moreover, IronQR is versatile enough to operate on Windows, Linux, macOS, iOS, Android, Docker, Azure, and AWS environments.

offers extensive support for various image formats for reading QR codes and provides a custom QR detection model for enhanced accuracy. It also allows for decoding QR data into different formats, such as strings, URIs, and point coordinates. On the other hand, when generating QR codes, **IronQR for .Net** supports multiple output formats, including images, streams, and PDFs, with options for encoding various types of data and applying styling features such as resizing, recoloring, and adding logos. **IronQR for .Net** offers robust fault tolerance mechanisms, detailed error messages, and customizable error correction for optimal performance and reliability.

Key Features of IronQR for .Net:
