**Mattia Cellotto Metamorphosis:** Metamorphosis is a massive collection of recorded synthesized and mixed sound sources. The library was designed to cover many topics, including lush textures, aggressive sounds, a vast range of pass-bys, pyrotechnics, bass drops, and many other types of sound.

The entire Recorded Section was recorded at 384KHz using microphones that record up to 200KHz, in addition to more traditional microphones. The result is sounds that can be pushed to new levels to provide more opportunities for sound design.

In many instances, I reduced the quality while editing the sound files to create what I believed was the most efficient version of a particular recording. However, in many instances, I added different versions at the original sample rate of 384KHz to give you the best from both perspectives.

All Synthesized Content was developed using Serum, and the Hybrid section was created by manipulating the recorded and Synthesized sound.

Methods like morphing were employed to blur the lines between both sources, creating a highly flexible yet ambiguous material that could be used for both abstract and realistic designs.

This library also comes with two other releases by Mattia Cellotto, both available for free: Crunch Mode offers 230 crunchy sounds created using a range of fresh vegetables, fresh bread, pizza crust, and a range of frozen items. This Borax Experiment gets you an impressive 158 squishy gory, slimy, and gooey sound effects.
