Devart dotConnect for Zoho Desk Professional v2.0.0 (18 Dec 2025)

2026-01-12 11:51:42

is a powerful ADO.NET provider that easily integrates Zoho Desk data into your .NET applications. It offers seamless connectivity and high performance, allowing you to access and manage Zoho Desk data like any other database. With standard ADO.NET classes and Visual Studio integration, you can quickly start without learning specific Zoho Desk API details. The tool supports a wide range of .NET platforms, ensuring compatibility and reducing the complexity of developing and maintaining your applications.

One of the standout features of **Devart dotConnect for Zoho Desk** is its support for SQL queries, enabling you to use familiar SQL statements to handle Zoho Desk data. This includes performing CRUD operations (Create, Read, Update, Delete) and executing complex queries with JOINs and WHERE conditions. Additionally, the provider integrates with Entity Framework, allowing you to use LINQ to Entities and manage data relationships efficiently. The bundled visual designer for ORM models simplifies the process of building your data access layer, making development faster and more intuitive.

With **Devart dotConnect for Zoho Desk**, integrating and managing Zoho Desk data in your .NET applications becomes a hassle-free experience. Whether building new applications or maintaining existing ones, this provider offers the tools and
