Tutorial　　平面设计

Create a Stylized Scientific Illustration: Features capabilities, how you can utilize the color picker tool and make color palettes using split screen mode to utilize references (I'll show you mine), and how to utilize the tool for symmetry. I'll demonstrate my preferred tool for enhancing sketches without drawing everything over again. Then we'll make our watercolor butterflies and background flowers using the brushes provided by Procreate. I will also show you how to create texture on watercolor paper using the brush included in the course and how to make different versions of it.

I will go through each step necessary to complete the instructions in the course. This course is suitable for students who are just beginning. You can reduce the rate at which you are viewing this training (by pressing 1x right next to the button to play).

The units in this course:

- introduction
- Course project and materials
- Hello Procreate
- color selection
- Split screen mode
- canvas symmetry
- Sketch
- color blocking
- masks
- DETAILS
- background sketch
- Final details and remarks on the conclusion
