Royal Apps Royal Server v5.4.50515 for Win x64 Multilingual

2026-05-21 20:55:48

Royal Apps Royal Server is a secure remote administration add-on that is compatible with Royal TS/X. It enables you to control servers and IT environments from a single location, regardless of the device or operating system. You do not need to go through various tools; you can see and manage services, processes, events, and virtual machines using a single interface.

It functions as a secure passage between your device and distant networks. Every connection is capable of being encrypted, and the access can be limited to the use of the standard Windows authentication, in such a way that only authorized users will be able to carry out management functions. This suits it to a small setup as well as to large enterprise networks where security and central control are a factor.

Royal Apps Royal Server will also enable you to work more quickly since you can control several computers simultaneously. It is possible to execute PowerShell scripts on multiple machines, to start and stop services at once, to check the health of the system, and to operate Hyper-V or VMware machines without having to log into each one of them. It is easy to put up, easy to configure, and is designed to add more modules in the future.

Key Features of **Royal Apps Royal Server**:

1. **Centralized management** – View and control events, services, processes, and sessions from multiple computers in one dashboard
2. **Secure communication** – Uses encryption and Windows authentication to protect remote access
3. **Multi-platform support** – Works with Royal TS/X on Windows, macOS, iOS, and Android
4. **Virtual machine control** – Monitor and manage Hyper-V and VMware instances remotely
5. **PowerShell execution** – Run scripts on one or many machines and see results instantly
6. **Bulk operations** – Perform actions like restarting services across multiple systems at once
7. **Logging and auditing** – Track activity using file logs and the Windows Event Log
8. **Health monitoring** – Check uptime, CPU usage, and memory consumption of remote hosts
9. **Extensible design** – Modular structure allows new management features to be added
10. **Quick setup** – Fast installation with a simple configuration tool
11. **Flexible licensing** – Suitable pricing for both small teams and large organizations
12. **Automatic updates** – Get notified when new versions are available
