FlyTreeViewPro Suite for D10.4 Sydney Full Source

2024-12-18 23:01:31

FlyTreeViewPro Suite is considered to be 100% Delphi VCL suite which has the ability to represent a very fast tree as well as grid and at the same time a list of the technologies that are available on the VCL component in the market. FlyTreeViewPro Suite is a very powerful and at the same time a flexible control that permits the user and developer in order to create fast as well as a convenient application easily.

FlyTreeViewPro Suite Great Features:

It has the following features and attributes that are stated as below such as:

- It has a blazing fast speed which can add, sort, clear about 100,000 nodes in lesser than 0.5 seconds for the user.
- It permits the user in order to get different controls in a single go, fast as well as a strong and at the same time a flexible control of OCX for the symbolization off the grid like as well as the hierarchical information which is available and finally the replacement for more than 30 controls that are available inbound as well as unbound and the combined styles.
- It has the ability to combine the trees, good performance and it is possible for the user as well as the program we use the standard grid method, along with the tree view method.
- It can authenticate to 32-bit as well as split up the MS commCtrl barrier of the 64k along with the visible nodes that are available. It should be noted that each node has the capability to hold a massive amount of arrays which belong to the sub nodes.
- There is a single limitation which is the amount of the user memory.
- It has a smart logic that has the capability to support the checked as well as optioned and even the combined two trees that are available and also to supply the smart technologies of the auto switching checkboxes and option buttons.
- Columns are movable as well as clickable that are capable of being shown or being hidden. They can support the colored fonts as well as the titles.
- The background can be smart during which is scrollable on a big array of information which is available without the invention of the huge background bitmap.
- The right to left support is present for the users and developers and it is possible for the user in order to develop the software for the middle eastern states basically.
