Duplicate File Detective v7.4.69 for Win x64 Enterprise Edition

2026-05-06 18:11:46

Duplicate File Detective is a Windows application that assists you in locating and managing duplicate files on your computer, along with external drives and even network drives. Rather than manually searching to find copies, it quickly scans your system and presents you with what is duplicated so you can decide what to keep. You can always delete, move or compress additional files and even replace them with links so that nothing of great significance is lost.

In addition to the space-saving functionality, the software also assists in ensuring the organization and ease of management of your files. You can also accelerate the process of backing up files, enhance the speed of the search process, and reduce the amount of clutter in the shared folders by eliminating duplicates. This is particularly practical with businesses or anybody dealing with such large volumes of data and desires a more organized, efficient system.

Duplicate File Detective has been evolving over several years and is developed to be able to manage a small and a large environment. Its high power and ability to work with any tool lets you have total control over how duplicates are identified and managed whether you are working on a personal computer or on a company network.

Key Features of **Duplicate File Detective**:

1. **Accurate duplicate detection** – Finds duplicates using deep file analysis, with an option to confirm matches exactly (byte-for-byte) for maximum accuracy.
2. **Scan multiple locations at once** – Search across local drives and network storage in a single scan, saving time and effort.
3. **Automated reports** – Schedule reports to run automatically and receive them by email, so you stay updated without manual checks.
4. **Flexible file handling** – Choose to delete, move, or archive duplicates based on what works best for you.
5. **Link replacement option** – Replace removed duplicates with shortcuts pointing to the original file, so access is never lost.
6. **File ownership reporting** – See which users own duplicate files, useful for managing shared or company systems.
7. **Built-in checksum tool** – Generate file hashes to verify file integrity or compare files more precisely.
8. **Exportable reports** – Save results in formats like PDF, Excel, CSV, or HTML for easy sharing and analysis.
9. **Smart selection (SmartMark)** – Automatically suggests which duplicate files to keep or remove, simplifying decisions.
