平面设计　　Tutorial
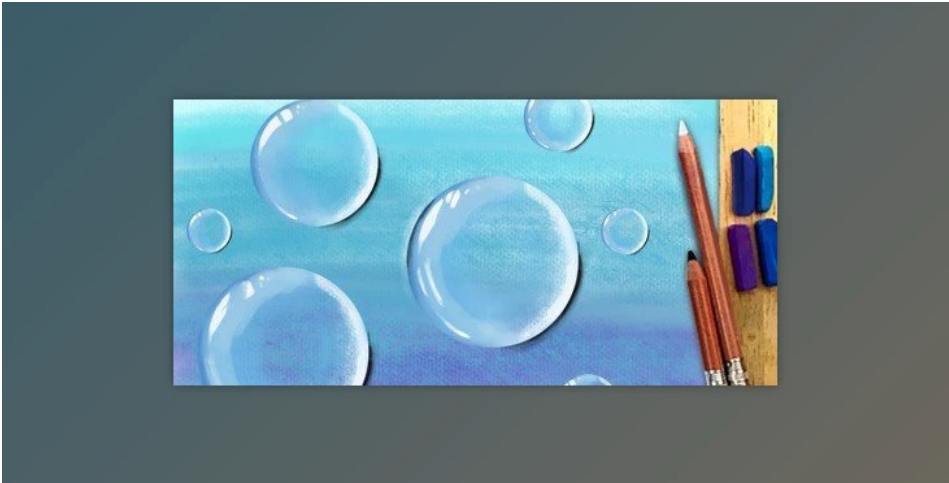

Create Full 3D Water Droplets: This course, Create Fully 3D Water Droplets by using Pastel Chalk Techniques, is the shortest class I've ever created. It will teach you in an easy-to-follow manner how to make pastel water drops that have texture and a 3D look. I will demonstrate my illustration process and ways to design the images which make them easy to replicate. In this course, I guide you from beginning to end, making a full-on water drop set against the background. One of my objectives is to show you how easy it is to finish.

I'll even give you some brushes I used during class.

In This course, I'll show you how:

- My step-by-step guide to making the 3D water droplet
- ideas for creating genuinely diverse droplets
- creating color palettes
- airbrushing to give the appearance of dimension and shine
- my workflow uses layers
- making choices and changing selections
- by using masks that are quick to apply
- Methods to ensure that the droplet is completely editable later on for creating duplicates

If you're an illustrator aspiring with a basic understanding of Procreate and Procreates, you'll be able to follow the entire process. This course will benefit anyone wanting to master more Procreate techniques, particularly creating selections and then adjusting them to be used as masks for creating shadows and highlights.

The most important concepts I will cover are:

- A review of my brush modifications and adjustments
- how do you create a sparkling 3D effect
- ways you can approach your work

This class is perfect for anyone, even if they are not sure what you'll use the droplets of water for! The ability to learn new Procreate workflows is always beneficial, and I assure you that you'll make a fantastic 3D water droplet. And it's fun once you've mastered the basics of it!

Intro to Create Fully 3D Water Droplets Using Procreate

This short introduction will provide you with an overview of the course.

Lesson 1: Explanation and Starting the Background

In this lesson, I'll discuss the main goals of the class and guide you through the first step of the structure. I will teach you how to make the color scheme from an image and explain some steps we'll accomplish.

Lesson 2: Methods for Creating Contours

In this video, I will go through the entire procedure of selecting. I will show you two methods that are great for creating depth using airbrush techniques.

Lesson 3: Adding Some of the White Contouring

In this lesson, we'll be working on contouring a bit more. We will use a soft airbrush that uses both blue and white. We slowly

start creating actual dimensions.

Lesson 4: Creating Varied and Brightest Highlights

This is the course where I show you various methods of making highlights, and I will teach you how to make it simple to change the highlights while keeping them easily editable.

Lesson 5: Finishing Up the Water Drop

The final touches are put in here, and I then show you how to create the drop and then many variations. The fact that they can be edited in total is a huge help, and it is possible to play around with various changes.

Lesson 6: Conclusion and Next Steps

The lesson will be concluded during this class.

Concepts discussed:

The topics covered include but are not limited to the creation of three-dimensional water drops, Highlights, and shading in 3D Procreate brushes and transparency, layering and transparency, transparency, the Brush Studio in Procreate, altering the size of Procreate's brush grain within Procreate's Brush Studio, adding texture brushes, brush stamps and procreate brushes to add the interest of your workflow, best practices for a workflow using the best painting techniques Procreate composites, methods using paints and blending and more.
