TMS AI Studio v1.7.1.0 (07 May 2026) for Delphi 11-13 Florence Full Source

2026-06-02 11:49:10

By using **TMS AI Studio**, you will be able to integrate modern AI into your Delphi and C++Builder applications in seconds. Acting on natural language commands, analyzing data, automating workflow, and making intelligent document processing a reality, your apps can be smarter, simpler, and future-proof.

TMS AI Studio is LLM-agnostic, and thus, you are not restricted to a provider. You may be able to access such popular services as OpenAI, Gemini, Claude, Grok, DeepSeek, Perplexity, Ollama, and Mistral. You can switch or combine models effortlessly to have full flexibility and freedom in selecting the correct AI per task.

With the MCP protocol, you may create AI agents that can automate work and integrate with other services. It is also possible to open up AI to your app functions and to bring Retrieval Augmented Generation (RAG) using your proprietary knowledge base and multimodal AI, allowing you to work all the way through not only text, but images, PDFs, and audio.

Key Features of **TMS AI Studio** :

1. **Natural Language Control** – Let users interact with your app using plain English (or other languages) instead of complex menus.
2. **LLM-Agnostic Integration** – Works with OpenAI, Gemini, Claude, Grok, DeepSeek, Perplexity, Ollama, and Mistral. You can switch or combine models easily.
3. **MCP Agent Support** – Create intelligent agents with the Model Context Protocol, allowing automation and integration with 3rd-party MCP services.
4. **Function Calling** – Define custom tools and functions that AI can call directly to control your app or trigger external services.
5. **Retrieval Augmented Generation (RAG)** – Improve AI accuracy and relevance by feeding it your own knowledge base or documents.
6. **Multimodal AI** – Go beyond text: process PDFs, images, and audio. Use OCR for text recognition, extract information from documents, or convert speech to text.
