# DIZipWriter v6.11.0 (09 Mar 2023) for D11 Alexandria Full Source

2024-12-18 23:01:31

DIZip Writer is considered to be a Delphi component in order to create a very compatible PKZip as well as the ZIP which is archived. The output which is archived basically relies on the TStream and has the capability to write files directly, memory or even the database of the BLOBs. It should be added that the DIZip Writer has a performance which is included in the primary course and along with the approaches that are present in order to create new archived ZIP and it is composed by different kinds of information just like the document, streams, strings and last but not least memory buffers. It permits the user and developer as well at the software in order to write to the archive as many time as they appear possible. Distributor user in order to create new archive file even before the first chunk of the information being obtained and the information basically has the tendency to flow and they have the ability to write in the tiny chunks at a time. It has the capability to arrange all the information in order to be archived away without having the need for the temporary storage and it does not produce any file which is temporary for the user and developer. DIZipWriter has the capability to arrange all the information and it can shop worldwide the comment that are archived in addition to the comments that are individual for each and every entry long files are being supported just like the relative and absolute path names. The process of direct streaming is very important and efficient because it has the ability to avoid all the temporary storage of the bitmap as well as the data of the BLOB. All these libraries usually need extra step as well as application in order to touch the object data at least twice by the user. It has the capability to store a global component which is archived as well as the individual component for each and every entry separately. In this case the file names that are long are being supported.

## DIZipWriter Great Features:

It has the following features and attributes that are stated as below such as:

- With the help of it the user does not require a temporary interface for the process of storing the data at all.
- With the help of it the user has the ability to add comments to the entries with the help of a single zip file.
- The process of direct streaming in the DIZipWriter is considered to be very efficient and it does not utilize a lot of cache.
- A lot of zip components basically require intermediate files that are temporary in order to perform the operation.
- It has the ability to provide the power to the user and developer in order to convert the stream as well as the memory buffers directly to the file of the zip.
- It is very easy to use and it is considered to be user-friendly.
