Studio AAA - Glitch Machine:

Glitch Machine is a fully customizable glitch art template for Adobe After Effects, designed for clean drag-and-drop use. It consists of specific automations, expressions, custom displacement maps, animated overlays, and textures particularly created for glitch results.

The template offers functions like chromatic aberration, CRT display effects, animated distortion, and vibrant dithering.

With colour-coded layers, in-assignment comments, and step-by using-step commands, users can create glitchy animations using their own artwork, snap shots, or renders with no need plugins or scripting. Ideal for both novices and professionals, it simplifies creating outcomes like glowing chromatic aberration, textured dithering, and CRT bending scanlines.
