UniFalcon Components Pack DC20250915 Support Delphi 12-13 Florence Full Source

2026-04-29 13:31:34

is an extensive collection of components designed to enhance and streamline web and mobile application development using UniGUI in Delphi. The package includes a convenient installer that simplifies the installation process, configuring the entire environment for developers. Each component is meticulously crafted to offer a wide range of functionalities, catering to various aspects of web and mobile application interfaces.

Included Components:

- FSiGrowl: A dialog component designed for both web and mobile applications.
- FSKendoUI: A graphics component utilizing the KendoUI API for web and mobile interfaces.
- FSMask: A web component allowing runtime editing with mask support.
- FSButton: A customizable button component for web applications.
- FSMap: A component integrating Google Maps functionality for both web and mobile applications.
- FSColorPicker: A color picker component for web applications.
- FSEdit: An editor component with password-strength support for web applications.
- FSToggle: A customizable toggle component for web and mobile applications.
- FSMenuButton: A button component featuring a menu for web applications.
- FSComboBox: A combo box with ValueID support for web applications.
- FSCalcEdit: A calculator component for web applications.
- FSGoogleChart: A chart component utilizing the Google Charts API for web and mobile interfaces.
- FSTheme: A theming component designed explicitly for uniGui in web applications.
- FSToast: A dialog component for displaying toasts in web and mobile applications.
- FSConfirm: A dialog component designed for confirmation messages in web and mobile applications.
