Devart dotConnect for FreshBooks Professional v3.0.0 (18 Dec 2025)

2026-01-12 12:11:00

is an ADO.NET provider that simplifies working with FreshBooks data within .NET applications. By integrating seamlessly with ADO.NET or Entity Framework, allows the effortless incorporation of FreshBooks services into your projects. With familiar ADO.NET classes like FreshBooksConnection, FreshBooksCommand, FreshBooksDataAdapter, and others, you can quickly start using it without the need to learn FreshBooks data access specifics.

Creating a connection in Server Explorer is straightforward: simply click "Connect to Database," change the Data Source to "FreshBooks Data Source," and provide your login URL, FreshBooks user ID, and password. This enables you to work with FreshBooks data directly in Visual Studio, allowing you to select and edit data from FreshBooks entities.

With **Devart dotConnect for FreshBooks Professional**, you can build your data access layer without manual code writing, thanks to its powerful design-time editors. Binding data grids and other controls to FreshBooks data are made easy with smart tag configuration. Furthermore, you can leverage the power of SQL with full CRUD support, enabling you to perform SQL queries against FreshBooks data, including SELECT, INSERT, UPDATE, and DELETE statements. Moreover, **Devart dotConnect for FreshBooks Professional** provides Entity Framework support, allowing access to FreshBooks data via LINQ to Entities, and entity relations, and enhanced Entity Framework support with Visual Studio integration through Entity Developer.

Key Features of **Devart dotConnect for FreshBooks Professional** :

1. ADO.NET provider for working with FreshBooks data
2. Seamlessly integrates with ADO.NET or Entity Framework

所有软件资源 100%安全 已检测 无病毒 无篡改
