### Topaz Labs - Topaz Mask AI:

Machine learning and an automatic trip technique allow for a new form of image masking in Topaz Mask AI. Unlike its predecessor, which required dedicated manual brushing, this software does the hard work for you. To make a flawless mask, all you need is to draw a blue line around the subject, fill in the areas of interest or those to be removed, and hit Compute Mask. With this method, you can achieve the precision of a mask on the first try without needing burdensome tools and icons.

### Masking Images for Every Style of Photography

Four simple steps comprising keep, cut, compute, and replace accomplish the once daunting task of image masking. Request and Mask AI will retrieve results in any preferred order. Choose contrast mode for basic masking or AI mode for adding intricate details. With the blue brush tool, illustration is made easy. Red and green buttons designate where to get rid of, retain, or replace suggestive areas of the image. The new "Auto" feature quickly sets the stage by identifying subjects and constructing a trip without any additional work.

### Polishing and Improvement Features

For Mask AI, accurate brushes are included for meticulous tweaks that do not require the ideal painting of new outlines. Mask enhancement can be performed with the help of post-processing sliders. The Edge Softness and Edge Shift sliders refine the mask edges and their sharpness as well as location. For challenging textures such as fur or hair, the Foreground Recovery, and Defringe sliders restore color and reduce edge contamination effectively.

### Replacing of Background Done Effortlessly

Whether in need of correcting a bad background or creating new artistic altercations, Mask AI provides robust tools for background replacement. The background can be blurred or replaced with an image, and even a solid color can be suffused. Background and foreground can be adjusted for smoother blending. Mask AI makes sophisticated adornsments aside from flaky hair or complex foliage easy, thereby freeing the hands of photographers to delve into their creative thoughts.
