RemObjects Hydra v6.3.0.1259 for RAD Studio 10.4 Sydney and .Net

2026-06-09 16:17:30

RemObjects Hydra is described to be an application framework that permits the developer and users in order to create a modular application which can blend handled as well as the unmanaged code in the same project, and at the same time develop a seamless user experience while blending the best technology available from both the stages for the users.

The Hydra on the other hand has the capability to bridge the gap which is available between the words of the unmanaged Delphi code, and Microsoft .NET along with the silver light platform for allowing the users and developers in order to incorporate within the same program precisely. The reusing of the Delphi code from the fresh extending of the existing program of Delphi VCL along with the new components that are generated in the .NET, Silverlight and even fire monkey.
