SQL Backup Master offers a straightforward and free solution for easy, reliable off-site backups of SQL Server databases. This user-friendly software allows users to back up their databases to various cloud storage services, including Dropbox, OneDrive, Amazon S3, Microsoft Azure, and Google Drive. It also supports backups to FTP servers, local or network folders, and storage devices. With compression, encryption, scheduling, recovery options, and notification services, **SQL Backup Master** simplifies the backup process, ensuring data protection without complexity or cost.

provides essential features such as full, differential, and transaction log backup support. Users can easily schedule backup jobs, receiving notifications through email, desktop alerts, or webhooks. The software allows backups to local or network folders, FTP servers, and popular cloud storage services, leveraging the advantages of modern cloud storage for enhanced availability, reliability, scalability, and cost-effectiveness. **SQL Backup Master** runs seamlessly in the background as a system service, offering a powerful yet intuitive backup logging and log viewer, along with features like data compression, encryption, and automatic purging of older backups. With its ability to execute custom SQL and batch scripts before and after backups, **SQL Backup Master** provides a comprehensive solution for SQL Server database backups.

Key Features of **SQL Backup Master**:

1. Back up SQL Server databases to cloud storage services like Dropbox, OneDrive, Amazon S3, Microsoft Azure,

2. Google Cloud Storage, etc.

3. Backup options to FTP servers, local/network folders, and attached storage devices.

4. Cost-effective SQL Server backup software with compression and encryption features.

5. Support for full, differential, and transaction log backups.

6. Simple yet powerful backup job scheduling.

7. Notification services through email, desktop alerts, and webhooks.

8. Diverse storage options, including local folders, network folders, and attached storage devices.

9. FTP server support with FTP, SFTP, and FTPS capabilities.

10. Integration with popular cloud services such as Dropbox, Google Drive, Box, Amazon S3, OneDrive, and Azure.

11. Automatic background operation as a system service.

12. Powerful database backup log viewer for monitoring.

13. Easy-to-use data export for database backup recovery.

14. Automatic purging of old backups beyond a specified time frame.

15. Execution of custom SQL and batch scripts before and after backups for additional customization and automation.
