SRT MiniServer v2.0 Build 100

2025-01-01 22:18:45

SRT is the brand new protocol for transport video streams across inconsistent networks, like the web.

SRT MiniServer was made as a solution, which may be placed into the workflow in a couple of minutes. No settings or complex settings.

A number of our clients utilize software mixers like vMix or OBS.

SRTMiniServer can be given a sign from them and send a sign to them using the NDI protocol.

SRT MiniServer creates NDI and SDI output.

That means it's possible to use this as inputs for several TV-Production systems such as NewTek TriCaster and others.

SRTMiniServer enables send feedback to places. It has a powerful attribute for remote manufacturing and teleconference.

For fracture firewalls, we supply an approach named ProxyAddon.

It is a 100% functioned alternative as soon as your Studio doesn't have a dedicated IP.

Additionally, it is a power approach to resolve the "first-mile" issue.

Our SRTMiniServer can accept feed out of any SRT hardware encoders and cameras

Our customers utilize these HW-products to send SRT into SRTMiniServer:

- Haivision encoders
- Hillview encoders
- URay encoders
- Teradek encoders
- JVC Connected CAM camcorders

SRTMiniServer Great Attributes:

- Around 16 incoming flow
- multi-codecs: h265, h264 and mpeg2
- 4K & 8K service
- recording
- Multi-channels sound
- two-way communications
- NDI and SDI outside
