Malware Scanner v1.8 (Malicious Code Detector) Full Source

2024-12-18 23:01:31

Malware Scanner helps you scan your site with just one click. It can detect known and undiscovered malware, shells, viruses, malicious code infections, and other web-based threats.

Malware Scanner is equipped with a compelling admin panel, from which it is possible to run a scan and is integrated with the Security Check tool. Its Admin Panel has many features and options, and the scanning process can be modified.

Malware Scanner (Malicious Code Detector) Great Features:

- **Scanning for Malicious Files**Antivirus Scanner scans your site for malicious files and notifies you if any of them are detected.
- **A standard Scan is an option.**
  The standard scan scans all files using the basic scan engine.
- **Deep Scan option**
  A deep scan is a scan of the entire file with the largest scan engine; however, it could reveal a variety of false positives.
- **Scan-Customization**
  You can select which directories and files have particular extensions to be scanned. Directories and files can be added to the allowlist.
- **Variable and Customizable Scan Strings**
  Additional scan strings may be added.
- **More Information**
  The program provides detailed details on the detected file, such as File Stats and Threat Information.
- **Security Check**
  This tool is powerful and will show all the vulnerable PHP Functions enabled on your host.
- **Dashboard with Stats File Stats**
  In the Dashboard, you can view the statistics.
- **No database required**
  The script can be used without any database connection.
- **Highly Optimized**
  The script is lightweight and won't overwhelm your website.
- **100% Responsive**
  It looks great on a variety of screens and devices.
- **Easy to set up**
  The script is integrated into Installation Wizard, which can assist you in installing the application.
- **Easy to use**
  The script is based on using the "Upload & Run" principle principles.
