# SynEdit for VCL v2024.11 (24 Apr 2024) for Delphi 10-12 Athens Full Source

2025-01-10 21:25:25

is a versatile, user-friendly syntax highlighting editor control for Delphi and C++ Builder developers. Unlike traditional Windows controls, SynEdit offers a unique and customizable experience perfect for creating advanced code editors or text processing applications. Fully compatible with Windows, it supports both 32-bit and 64-bit platforms, ensuring broad usability for modern applications.

It provides everything you need to integrate it into your projects. It includes design-time and runtime packages for seamless development and allows for complete customization to meet specific requirements, whether working on simple text editors or feature-rich IDEs.

## Key Features of **SynEdit for VCL** :

1. Syntax Highlighting: Offers robust support for syntax highlighting, making it easier to read and edit code in multiple languages.
2. Customizable: Allows developers to tweak the appearance and behavior of the editor to match their application's style.
3. Cross-Platform Support: Compatible with Win32 and Win64, ensuring your application runs smoothly on both architectures.
4. Lightweight and Independent: Not based on Windows common controls, enabling faster performance and better control over the editor's functionality.
5. Source-Only Release: Provides full access to source code, enabling deep customization and integration into projects.
6. Design-Time and Runtime Packages: Includes everything needed for development and deployment, simplifying the process for developers.
