myCloudData SDK v1.0.0.0 (09 Feb 2017) Retail Full Version

2026-10-04 21:23:30

myCloudData SDK The most efficient and straightforward way to store your data on the cloud.

Do you want to control the completeness of your data and host your data using a private and internal server? This SDK is available to you. The myCloudData SDK is installed onto the node.js server and connects to your MS SQL Server or MySQL database, and may also connect to additional databases in the future.

MyCloudData API myCloudData service API is entirely OAUTH 2.0 REST/JSON-based. It is accessible from almost any programming language or environment that provides HTTPS access. From simple HTML/Javascript to use it in conjunction with frameworks such as JQuery, Angular... It can be integrated into conjunction with popular REST libraries like C#, PHP, Python as well as Delphi,... in addition to providing components that wrap the complete API to allow direct and more usable use with Delphi, Pascal, and C#.

It is possible to build apps that make use of the myCloudData information from devices on mobile, IoT, web, and desktop applications. Your IoT application can record sensors' data in myCloudData in the cloud, and the data can be analyzed using desktop or web applications and accessed using a mobile device. The possibilities for using myCloudData are limited only by the imagination of our users.

myCloudData is accessible by multiple applications or devices with one myCloudData account. However, it can also be controlled the sharing of data with several myCloudData accounts. The permissions for CRUD can be set per table to share data across other accounts. This way, it's easy to gain complete control over the accounts that produce and take data.

The myCloudData API allows for the flexibility and ease of retrieving and updating metadata. Begin using myCloudData today, and fine-tune the metadata you have as you progress.

Only one SDK licensing fee per domain includes unlimited support and updates to the SDK for one year.
