What is New at Telerik UI for Silverlight?

Custom time indexes for ScheduleView

The feature gives the ability to add custom time indexes to you. This attribute is particularly useful when dealing with multiple time zones. In the case of an appointment scheduler, you'd love to indicate the appointments in the time zone of where they occur as opposed to the local time zone of this user.

Schedule View: Agenda View mode for Silverlight

The Schedule View to get the Silverlight controller of Telerik is currently outfitted with an Agenda View mode. The newest Schedule View mode allows you to display your appointments at a list grouped by date. You can tailor the setting of modifying the styling for the text labels, time, and date formats to visualize the file.

RibbonUI into the Diagram

We all know that is building your ribbon UI may be a demanding and tedious task. Therefore we've done it! From the VS Toolbox, now you can utilize the RibbonUI that is readily available directly with this launch, to allow the end-users of your app to examine and alter the diagram items' preferences.

Smart Routing into the Diagram

We are introducing a brand new mechanism, also, to make sure that the connections between shapes and objects don't overlap or intersect, leading to readability and better visualization for your end-user.
