Delphi   VCL   Components

MMX Code Explorer is just a course browser and has the ability to rebuild the courses as well as the inheritance along with associates right within two views of filters, along with the explorer of windows. On the left side the explorer is docked right from the editor of IDE. The courser view which is located on the top has the capability to display the courses as well as the inheritance connection for the module which is current for the users and developers. It should be noted that the member's opinion has the capability to show the members that are filtered to the method which is chosen.

MMX Code Explorer Great Features:

It has the following features and attributes that are stated as below such as:

- It has the capability to provide a quote browser which has the ability to improve the navigation process which is based on the tube a navigation.
- Applying the method which has extract as well as I think the local var, and finally renaming the local and so on.
- The live documentation process in this case has the capability to support any comment style for the user and developer.
- Rearranging the members with the use of the drag-and-drop process in the member View as well as the interfaces along with the process of implementation.
- The process of sorting as well as maintaining the region as well as the process of optionally sorting right within the region. Sorting the hints that are basically emitted for classes and they are not matching the default scheme.
