Benthic Software GoldSqall v2.4.242 (x86 & x64)

2026-04-08 13:01:19

Benthic Software GoldSqall is a powerful SQL query, editing, and exporting tool designed to streamline database management tasks. It offers native connectivity to leading databases such as Oracle, PostgreSQL, MySQL, Firebird, SQLite, and SQL Server and support for any database through OLEDB or ODBC drivers. The software's feature-rich environment includes an advanced SQL Editor with syntax highlighting and formatting capabilities alongside high-speed data equipped with sorting, filtering, and transposed view mode, ensuring efficient data manipulation and analysis.

Users can execute SQL queries and scripts seamlessly with **Benthic Software GoldSqall**, leveraging support for database-specific commands, stored procedures, and variables like bind (:bindvar) and prompt (&AskMe). Its language copy & paste feature facilitates integration with various programming tools, catering to languages like C++, PHP, and Object Pascal. The user-friendly interface allows for easy navigation through database objects like tables, columns, and schemas, providing a comprehensive view of the database structure.

offers robust export functionality, enabling users to export data directly to Excel, Calc, CSV, and XML and insert statement scripts. Notably, it supports direct export to Excel files without requiring Excel installation. With script autorun support and full command-line options, **Benthic Software GoldSqall** provides a versatile solution for efficient database management and querying tasks, empowering users to streamline their workflows and enhance productivity in database-related operations.

Key Features of **Benthic Software GoldSqall**:

1. Native connectivity to Oracle, PostgreSQL, MySQL, Firebird, SQLite, and SQL Server
2. OLEDB and ODBC support for connecting to any database
3. SQL query and script execution with database-specific commands and stored procedures
4. Support for bind variables (:bindvar) and prompt variables (&AskMe)
