There are two actions: JPEG and PNG Overlays. The main difference between Overlay Action JPEG and Overlay Action PNG is that JPEG uses screen blend Mode.

## 2ND WAY: Quickstart PSD COURSE

This allows you to work with a Photoshop file to choose an overlay you like and make layers visible. This is useful because it is visible on the thumbnails for image layers. However, it is a nuisance that the file might not be able to open correctly in certain variations that use Photoshop. This is a feature that's optional and is included as is.

### 3RD WAY: DRAG'N'DROP

- 3.1 Drag out of the folder any image to save it within a Photoshop file. You can apply the Blend Mode for images with a black background. To change the blend setting, double-clicking on the layer and the style window of the layer will be displayed. Switch the blend mode and move on through the steps. If overlays have transparent backgrounds, it is not necessary to perform anything.
