Sony Catalyst Browse / Prepare Suite 2023.2.1 (WIN):

The Catalyst Production Suite seamlessly integrates powerful media preparation and efficient video editing, forming the core foundation for your video productions. Catalyst Prepare streamlines your workflow from camera to post-production, offering robust organizational tools, meticulous initial color correction, comprehensive metadata support, and more. Meanwhile, Catalyst Edit provides a focused and agile video editing environment, ensuring a swift and fluid cutting process.

How to edit the color of your video and images?

You can use "Sony Catalyst Browse / Prepare Suite" to change the color of your project.

Where can I download the product?

After subscription, You can download it for free from here.

With support for 4K, Sony RAW, and HD media, Catalyst Production Suite empowers you to maximize your camera's capabilities, including high dynamic range, wide color gamut, and stunning 4K resolution, throughout the entire production process.

Media preparation

Catalyst Prepare addresses all your media preparation needs:

- Directly view media from a camera, deck, or card reader.
- Perform a full-volume backup with checksum verification.
- Organize clips into bins for efficient management.
- Batch copy and transcode clips for streamlined processing.
- Make color adjustments and apply looks to enhance visual quality.
- Set in/out points to focus on relevant content.
- Establish multichannel audio assignments for optimal audio quality.
- Batch upload clips to Ci, Sony's video cloud service.
- Assemble a rough cut effortlessly using the Storyboard feature.

Post-production

When you're ready to transition to the editing phase, all the groundwork done in Catalyst Prepare seamlessly integrates with Catalyst Edit. In Catalyst Edit, transform your stunning footage into a polished, final product. Save time by accessing your Catalyst Prepare libraries directly and import existing storyboards to expedite the creative editing process. The focused toolset provides quick access to essential cutting tools, effects, titling, and more, allowing you to bring your production from concept to screen with ease.

What is Sony Catalyst Browse/Prepare Suite?

Sony Catalyst Browse/Prepare Suite is a set of software tools designed primarily for professional video editors and filmmakers. It's developed by Sony Creative Software and is tailored to streamline various aspects of the video production workflow. Here's an overview of each component:

1. **Catalyst Browse**: This is a media management software that allows users to browse, preview, organize, and manage media files efficiently. It supports a wide range of file formats and codecs commonly used in professional video production. Catalyst Browse enables users to quickly view and navigate through their footage, apply basic color

corrections, add metadata, and prepare clips for editing.

2. **Catalyst Prepare**: Catalyst Prepare builds upon the features of Catalyst Browse by offering additional tools for advanced clip organization and preparation tasks. It allows users to create rough cuts, storyboard sequences, and perform more sophisticated color grading and correction. Catalyst Prepare is designed to facilitate collaboration among team members by providing tools for logging, annotating, and sharing media files.
