ShieldUI v1.7.37 for JS & ASP.Net WebForms & MVC

2025-01-01 22:08:59

Shield UI is a flexible, multi-platform user interface library that's been delicately enhanced. It provides strong UI/UX widgets with a proven performance background that You could use in many business situations. An ample set of customization choices accompanies this detailed solution.

ShieldUI Chart is a data visualization component that will run on newer and legacy desktop browsers in addition to all mobile browsers. Constructed with HTML5, jQuery, CSS3, and SVG, the Shield UI Chart part makes your software Acceptable for Today's Web. It permits you to easily create a consistent look and feel throughout your whole web project. Suitable for small jobs or multi-team jobs, ShieldUI Chart is available as a JavaScript graph for pure clientside js growth, ASP.NET graph for server-side development, MVC graph for MVC perspectives, and version binding, or JAVA graphs for wicket programmers. The glossy appearance will guarantee the appealing presentation of your information and the viewers' continuing attention. The interface of these elements will shrink the growth time and secure the timely shipping of your job. As a result of HTML5, the ShieldUI parts work continuously on any stage and some other apparatus, letting you concentrate on configuring the part, rather than needing to worry about the browser and device support. ShieldUI Chart for ASP.NET contains the JavaScript Chart element and provides the same set of characteristic richness and quick performance at the comfort of Microsoft Visual Studio. A rich set of graph types, superb functionality, server-side occasions, and information population. Along with this, the controller can be bound to some data source, accessible ASP.Net, making it a superb mixture of client-side functionality and server-side installation.

Accelerate your style and execution process by leveraging the Shield UI JavaScript frame and its own server-side platform wrappers for ASP.NET, ASP.NET MVC, ASP.NET Core, and JAVA Apache Wicket.

The Shield UI JavaScript frame offers JavaScript HTML5 parts with a responsive layout optimized for optimal performance.

Shield UI for ASP.NET provides ASP.NET server-side wrappers for Shield UI's JavaScript controllers - Chart, Grid, Combo and Input elements, Barcode Suite, QR Code, and many more of those above 70 widget forms. This brings client-side functionality to the relaxation of the newest versions of Visual Studio.

The Shield UI ASP.NET MVC suite combines the performance of both client-side JavaScript together with the efficacy of ASP.NET. It delivers exactly the identical set of feature-rich and quick controls wrapped to the MVC tech - Chart, Grid, Combo and Input elements, Barcode Suite, QR Code, and a lot more of those over 70 widget forms. You can quickly install and install any one of our controllers in any MVC perspective and bind it into a version.

The Shield UI Grid element is an intuitive and adaptive data grid manufacturing instrument capable of imagining all types of tabular data. It supports several highly customizable configuration choices such as paging, sorting and filtering, grouping and aggregates, column transferring and archiving, editing, exporting, customized event handling, keyboard navigation, and a lot more.

The Shield UI Grid is optimized for functionality and may be attached to any kind of remote or local data, directly out-of-the-box. Take advantage of the exceptional data binding layout that simplifies operations, exposes an elastic API, and provides unmatched speed for big data collections.

ShieldUI Great Characteristics:

- Ranking
- Bar
- Line
- Spline
- Splinearea
- Scatter

所有软件资源 100%安全 已检测 无病毒 无篡改

Server-side occasions
Blend client-side functionality with instinctive server-side events to permit trusted management of consumer activities.

Numerous DataSources
Utilize the server-side wrapper of this graph for ASP.NET with any data source - SQL, Access Information origin, Linq Data Source, Object Data Source, Entity Data Source, XML Information origin, Custom Objects.

Mobile and browser service
Our charting part works on all browsers - mobile or desktop. You can use the same variant of this controller on any browser and device.

Combinational graphs
Blend more than 1 kind of series to set up information correlations or meet specific job requirements.

Zooming and scrolling
Zoom-in on particular points of attention on the chart with the mouse - one property permits this out-of-the-box.

Choice
The controller supports both single and multi-point choices.

Drill down
Re-populate, the controller with information upon stage choice to accomplish a drill-down installation. Each choice displays more related info for the provided data.

Several axes
Permit over 1 axis to the graph. Relate each data show with another y-axis to attain strong data cohesion on a single chart.

Text formatting
Format the information on each column or string with a string expression or a custom-made function. I love a fantastic level of flexibility.

Tooltip formatting
Utilize the default tooltip for the controller or build your own. This may be carried out easily with only a single house to define a series or a customized function to deal with the formatting.

Exporting and printing
Easily export the chart to a picture or print it.
