

Longtion RadBuilder v4.9.0.490

2025-01-06 23:12:49

RadBuilder is a complete rapid application development (RAD) tool to create interactive multimedia applications, database software, and Internet software for Windows - without programming. You do not need to become a developer, but with RadBuilder, you will feel like you. Though it's straightforward to learn and use, it's all you want to create expert software programs using an entirely visual drag and drop environment.

RadBuilder is a tool for designing and creating interactive multimedia applications, database software, and Internet applications without writing any code. And you do not need to be a software developer to do it. It is fast to learn and simple to use using its intuitive integrated development environment (IDE) and drag-and-drop objects. It needs no programming knowledge at all! You will be amazed at the powerful functionality and stylish visual appeal that RadBuilder places at your mouse-clicking fingertip. Layout and distribute your applications with a couple of clicks of the mouse.

RadBuilder contains 70 built-in item kinds. You merely put them in shape and edit their possessions' and the events' to customize them; however you desire. You will be able to design your graphical user interface as quickly as you can drag and drop!

From the application programmer's view, an event is only a name associated with some system event, for example, OnClick, to which activities can be connected. By way of instance, a button called Button1 has OnClick property. If you add activities to the OnClick event land, if a click event happens in the button, the action will be accomplished.

Among those attributes that make RadBuilder so fast and simple to utilize include the ready-to-use type and item templates, to use a template, only pick a type from the form template listing or drag an item template icon in the item template list and drop it into the parent or form thing; RadBuilder will finish up.

Longtion RadBuilder Great Attributes:

Create database software that could produce, restructure, draw information from, upgrade, and manipulate neighborhood (Paradox, dBASE, FoxPro, and Access) and remote database servers (Oracle, Sybase, Informix, Microsoft SQL Server, and DB2). It is possible to get a huge array of database servers, using ADO or ODBC to connect to various databases. Data items for database software

Gives a set of data-aware items that represent information from fields in a database record. If the dataset allows it, then empower users to edit that information and place changes back into the database. By putting data items on your database program's types, you can construct your database program's user interface (UI) to ensure data is visible and accessible to customers. DBGrid, DBImage and DBRichText items

You may display data from one record on the display, or record the info from multiple files with a grid (DBGrid). You can pick between items that are made to edit and display plain text, items that operate with structured text, items for images, multimedia components, etc. DBNavigator thing

It's possible to allow users browse through the documents of datasets and edit or add information. You might choose to incorporate your own items or mechanics to browse and edit, or you might choose to utilize an integrated item like a DBNavigator. Master/detail relationships

DBTable datasets could be connected into master/detail relationships. When you establish a master/detail connection, you join two datasets to ensure the documents of a single (the detail) consistently correspond to the only current record from another (the master).

Applications Tools

Lookup fields

You can specify search fields for dataset item, DBQuery or even DBTable. A search field is a mail-order field that shows values based on search criteria that you define. In its simplest form, a search field is passed on the name of an current area to search on, a subject value to look for, and also another field in a search dataset whose worth it should exhibit.

Calculated fields

You can specify calculated fields for dataset item, DBQuery or even DBTable. A calculated field exhibits values calculated in runtime. By way of instance, you may create a float area that shows values calculated from different areas.

Chart thing

Assess and summarize information from databases to ensure that consumers may conclude from your information. The DBChart thing enables you to present database data in a graphic format that rapidly lets users grasp the import of database details. DBChart comprises graph series categories: Line, Area, Point, Bar, Horizontal Bar and Pie.

Report items

It's possible to create database programs that publish database details. If you would like to allow your customers to print database info from the datasets on your database program, you can use Report items and visual report layout objects. You may use Report items to create many different reports, from easy banded reports to more complicated, highly customized reports. Users can also export reports into PDF (.pdf), RichText (.rtf), Excel (.xls) and Text (.txt) files.

Create Web programs

With RadBuilder you may make standalone Web applications the same way you would create ordinary database software. It's a revolutionary new method to produce online software. The standalone Internet application is a web server which operate without dependencies from another web server (IIS or Apache). Create interactive multimedia software

RadBuilder is an expert program development tool and multimedia authoring system for developing a vast array of utilities, interactive ebooks, presentations, catalogs, instructional or training materials, slide shows, promotional or sales materials, custom programs, and much more. Create autorun CD menus

Would you prefer to spread your product or business presentation, digital documentation or e-product(s) to a removable storage device such as a CD, DVD or USB stick? You can produce an autorun CD menu today and release your own presentations, files, documents, and applications on mobile media like CDs, DVDs, and USB sticks. RadBuilder can even directly burn your autorun CDs or make ISO CD graphics file with no external CD burning program.
