Eziriz Intellilock v3.5.0.0 (13 Nov 2024)

2026-04-08 11:18:36

IntelliLock is an innovative 100% controlled solution for licensing controls and applications. While .NET Reactor supplies a licensing system according to native code security, IntelliLock chooses a 100% controlled solution to employ protection and licensing attributes. You could generate this manner of single files without the need for additional documents.

It is flexible strategy permits you to complete licensing integration to any present system. IntelliLock supports the .NET Framework .NET Standard, ASP.NET, Silverlight, Compact Framework, and Mono. IntelliLock combines powerful permit safety, exceptionally elastic licensing functionality/schema with dependable gathering protection.

By imposing locks in your applications, you may freely distribute your goods for evaluation or trial and rely on lock expiry to induce the purchase of your merchandise once the test period expires. When application locks perish, your potential customer must buy a valid permit.

You might even place Expiration Days, Expiration Date, Global Time, and Executions restricts an IntelliLock secured assembly. When permit locks perish, your client needs to acquire a further permit to use your goods.

By blending trial locks with permit locks (license documents that are restricted), you can enforce any constraints on applications usage you would like. Most of all, without creating a line of code to accomplish this, you can showcase your merchandise to your niche.

Eziriz IntelliLock Great Features:

- Create trial versions of your applications
  - Establish an expiry date
  - Restrict use to some predetermined number of days following setup
  - Limit by the number of executions
  - Restrict the usage of every invocation to some set Variety of minutes
  - Restrict using your applications to an Entire number of moments
  - Custom locks - This Lets You implement custom trial limits.
- Easily turn your trial version to a fully licensed version using permit documents.
  - Lock permit files to a Particular machine through Hardware ID
  - Lock license documents to specific assembly features (business name, assembly variant...)
  - Embedded license documents. Permit files may also be saved as the embedded source in assemblies.
  - Insert custom permit information to the permit file (enables flexible permit Shema, modular licensing...)
  - Restrict usage of the permit files themselves to prolong trial intervals, reach subscription/time-based permit expiry...
  - Validate/Activate permit files through your License Server
  - Floating License/Concurrent User permit strategies
- Comprehensive license Administration
  - Handle your Products, Clients, Revenue
  - License Tracker to monitor permit generations/requests
  - ASP.NET management port creation - Handle your info on an ASP.NET server
  - Embedded database - No need for particular databases (MS SQL, Oracle...)
- Software development kit
  - 100% handled SDK libraries
  - Integrate license checking into your meeting and expand licensing functionality
  - IntelliLock mechanically reproduces the primary SDK library (IntelliLock.Licensing.dll) along with your meeting.
  - Create permit documents - Automate permit file creation
  - Create Hardware IDs

所有软件资源 100%安全 已检测 无病毒 无篡改

Applications Tools

    - Extend licensing purposes
    - Deactivate/Reactivate permit files (through license server or reactivation code)
    - Use your dialog box to reveal messages.
    - Helper class to encrypt/decrypt, sign/validate information to encourage custom licensing calculations
    - Permit management courses to Handle your information on an ASP.NET server (information is saved with an embedded database)
    - Declarative Obfuscation service
- Military-Grade strong permit encryption utilizing transparent encryption methods (strong RSA encryption)
- Visual Studio 2005/2008/2010/2012/2013/2015/2017/2019 integration through the IntelliLock automation Add-In
- Meeting merging/packing performance.
- Assembly Protection
    - Comprehensive Obfuscation features
    - String Encryption
    - Anti Tamper Protection
    - Suppress ILDASM
    - Powerful Name removal Protection
    - IL Code Encryption
    - Control Flow Obfuscation
    - Invalid Metadata Injection
- Complete 64bit assembly service
- Includes licensing and protection support. NET Core, NET Standard, ASP.NET, Compact Framework, Silverlight, and Mono
- Capability to lock/unlock/protect your own assemblies without including one line of code
- Control Line service
- Intuitive graphical user interface
- 100% managed solution - No native code is utilized to lock/protect your applications
