Requirements

- Students should have access to Adobe Creative Cloud. Adobe Creative Cloud, including Adobe After Effects CC which makes use of Adobe Character Animator as a subprogram. It is also available in Adobe Photoshop.
- A basic grasp of layering in Photoshop.
- The ability to connect to a webcam is necessary.

Description

Create animated characters using your webcam, and automate lip sync with Adobe's Character Animator!

Gfx plugin details of Learn Adobe Character Animator CC

The product is in **Tutorial category** , for more information about this post you can click on the home page link in the sidebar.

Motion-capture puppets work great for:

- animated explainer videos
- Cartoons, short films, and animations
- commercials
- innovative live-action characters that are interactive and interactive
- Motion comics
- any other thing that needs reusable characters there is no need to draw frames or set keyframes every time the character moves!

We'll discuss mouth forms, layer placement as well as synchronizing an audio track to the lips or making your own audio to set your puppet's voice. including physics to give you more realistic movements, designing custom-made puppets, and walk cycles.

This course uses Adobe Photoshop to create our puppets. The files are exported to Adobe After Effects, so both programs are required for effectively using Character Animator effectively.

This is an efficient way to make reusable characters for explainer videos, short films music videos, and many other types of media.

This course is intended for:

- Beginning animators.
- People who are interested in motion capture applications.
- Creatives are looking for new ways of self-expression.
