Aescript Slctr 1.0: SLCTR simplifies the process of selecting layers based on the playhead position, offering convenient tools for precise layer management.

 Key features include:

Layer Selection:

- Select All: Choose layers based on the specified type within the current scope.
- Select Behind Playhead: Quickly select layers behind the playhead within the defined layer type scope.
- Select Ahead of Playhead: Efficiently choose layers ahead of the playhead within the designated layer type scope.
- Select by Color/Label: Pick layers with the same color/label as the currently selected layers. Hold SHIFT to retain the current selection while adding to it.

Layer Adjustment:

- Shift to Playhead: Move selected layers to align with the playhead, preserving their relative timing.
- Flip Layer Order: Invert the order of selected layers (or all if none are chosen) from top to bottom.

Workspace Restriction:

- Current Workspace: Limit selections to the current workspace, streamlining the process.
- SLCTR is crafted for simplicity, typically requiring three or fewer clicks on the panel to achieve the desired selection. It excels in scenarios like re-timing a complex composition to a new music track. The compact layout is designed to sit conveniently on the right-hand side of the timeline for optimal usability.
