O&O Defrag Professional & Server v31.3.26057 for Win x64

2026-07-13 10:42:31

In the long run, any computer becomes slow, as files are stored as tiny pieces and scattered all over your hard drive or SSD. **O&O Defrag Professional & Server** corrects this by rejoining these pieces of the file and rearranging them in a faster manner. This leads to improved startup times, smoother operation and an increased life of your storage hardware.

One does not have to be a technology expert to use O&O Defrag. The interface is easily optimized and automatic, yet the more experienced users can enter a professional environment with the classic interface. You may leave it to run in the background, or you may initiate a defragmentation process with a single click- either way, your system is kept in a clean state without trouble.

O&O Defrag Professional & Server is provided with clever new options such as O&O Visual Disk to display SSD write activity, O&O StartupManager to reduce unwanted programs at startup, and Boot-Time Optimization to prepare system files before Windows is loaded. It will also clean the junk files, identify errors, and even support the latest ARM-based Windows devices so your PC or server can always perform optimally.

Key Features of **O&O Defrag Professional & Server**:

1. **Automatic Defragmentation** – Runs silently in the background without slowing you down.
2. **O&O VisualDisk** – Visualizes write access on SSDs and NVMe drives to help extend lifespan.
3. **O&O StartupManager** – Shows all startup programs with their impact on boot time so you can disable unnecessary ones easily.
4. **Boot-Time Optimization** – Optimizes critical system files before Windows starts, even with BitLocker enabled.
5. **DiskCleaner** – Removes temporary files, caches, and junk to free up valuable space.
6. **Check & Repair** – Detects and fixes disk and file system errors automatically.
7. **Program Uninstaller** – Lists all installed software and lets you remove outdated or unused apps with one click.
8. **Multiple Optimization Modes** – Quick and gentle for SSDs (SOLID/Quick), deep and thorough for HDDs (SOLID/Complete, IntensiveOptimize).
9. **ClusterView & Fragment Filter** – Shows the most fragmented files and the logical structure of SSDs.
10. **Faster Boot & App Launch** – Noticeably improves system and program startup times.
11. **Extended Hardware Lifespan** – Reduces unnecessary write operations, especially on SSDs.
12. **ARM & x86/x64 Support** – Works on Intel, AMD, and now ARM-based Windows PCs and servers.
