Neutral dream lightroom preset (DNG, JPG)

2025-02-10 16:59:11　　label 我要反馈　　下载页面

This preset is among my personal favorites and is a preferred editing style for my various sessions. This preset was created to highlight the natural white space in each photo, while also calming the other colors to give the impression of a light and airy impression. The edits included that are included in this preset feature a very high level of brightness because they are designed to give an extremely clean and bright appearance. It is the most popular modification that must be made while editing in order to achieve your desired editing.

This is a great preset for beginners or experienced bloggers, photographers, designers, and general photo editing fans. The download comes with the '.xmp file that can be used on the classic version of Lightroom on your desktop, as in addition to the '.dng file for the mobile version of your lightroom cc application and a download instruction guide.

- Compatibility with Adobe Lightroom
