Altium On-Prem Enterprise Server v7.2.4.9 for Win x64

The is designed to work closely with Altium Designer, providing a secure and efficient system for managing electronic design data. It ensures that all design changes are tracked over time, allowing for multiple revisions without overwriting previous versions. This server also helps teams organize and manage their design lifecycles so users can quickly see the current stage of any project and make informed decisions on its use. The on-premise nature of this server gives companies complete control over their data, making it easier to maintain security and compliance.

With the server's Workspace, teams can centralize all design assets like components, models, and project files. This workspace facilitates collaboration through review tools and commenting features, and it integrates with manufacturing tools to streamline the transition from design to production. The system ensures design consistency by enforcing company-wide standards and simplifies workflow management with customizable processes. These workflows guide designers through tasks like creating new components or reviewing designs.

In addition to managing design assets, the **Altium On-Prem Enterprise Server** enhances collaboration with built-in version control, eliminating the need for separate software. It also integrates with mechanical design systems (MCAD) to ensure smooth cooperation between electrical and mechanical engineers. The server supports integration with Product Lifecycle Management (PLM) systems to keep all design and project data synchronized, ensuring consistency across the enterprise.

Key Features of Altium On-Prem Enterprise Server :

1. Secure Data Management: Tracks design changes through multiple revisions without overwriting old data, ensuring all versions are preserved for reference.
