

## Winsoft Image Acquisition for macOS v1.7 for Delphi 10.3-12 Athens Full Source

2024-12-18 23:03:45   [label](#)   [我要反馈](#)   [下载页面](#)

**Winsoft Image Acquisition for macOS** is a Delphi component tailored for acquiring images directly from scanner devices on the macOS platform. Leveraging the ImageCaptureCore framework, this component offers seamless integration with Delphi applications, providing developers with a straightforward solution for image acquisition. It is compatible with Delphi versions 10.3 through 12 and ensures versatility across different development environments.

With the , developers gain access to a reliable toolset for capturing images, simplifying the process of incorporating scanning functionality into their applications. The component has the necessary features to facilitate image acquisition, enhancing the overall user experience. Additionally, the registered version includes full access to the source code, offering transparency and flexibility in customization.

One of the key advantages of the **Winsoft Image Acquisition for macOS** is its royalty-free distribution model, allowing developers to seamlessly integrate the component into their applications without additional licensing fees. This ensures cost-effectiveness and scalability for developers looking to deploy image acquisition capabilities in their macOS applications.

### Key Features of Winsoft Image Acquisition for macOS :

- 1. Facilitates image acquisition from scanner devices directly within Delphi applications on macOS
- 2. Utilizes the ImageCaptureCore framework for seamless integration
- 3. Compatible with Delphi versions 10.3 through 12
- 4. Source code included in the registered version for transparency and customization
- 5. Enables royalty-free distribution in applications, offering cost-effectiveness and scalability for developers
