Scalabium SMImport Suite v3.0 (b48) for D10-D10.4 Sydney

2026-10-03 18:25:12

The native Delphi components give quick and direct importing of data from MS Excel/XML/HTML/DBF/Open Office/Paradox files directly using outside libraries!

SMImport suite is a set of elements that could import information into TDataSet (almost any descendant) by an assortment of different document formats, as explained in the table.

Most parts support either loading from file and flow so that you can load from memory/blob/CGI flows and/or in multi-tier environments.

The SMImport suite also includes a user-friendly wizard, the TSMIWizardDlg () part, a self-explanatory wizard that guides end-users to import any info run-time through a user-friendly interface to help with load parameter configurations. This element gives your user complete control over the whole data import procedure through a few simple mouse clicks. Drop the component onto a form and implement it on a suitable button (or other consumer actions as you see fit).

As a programmer, if you require, you might limit the access (read, write, conceal) to some import setting in the wizard for users.

The SMImport is a native VCL engine with multi-language support.

Scalabium SMImport Suite Great Features:

Import MS Excel files directly without OLE such as Office 12 .xlsx documents (MS Excel 2007/2010)

Fill out any text file (fixed or comma-delimited formats)

XML file. Additionally supports the subset of all TClientDataset structure to save/load out of XML documents

Immediate importing of an HTML document

Paradox tables (Doesn't require the BDE)

DBase tables (doesn't need the BDE)

Import from some other BDE database/alias

Lotus 1-2-3 right without OLE

QuattroPro right without OLE

MS Access database with DAO/MS Jet (MS Access Isn't required)

MS Word file (MS Word is required)

Connect to import from ADO resources

Gain database (an immediate parsering option to Advantage Database)

DBISAM database (an immediate parser, alternate to ElevateSoft)

Clarion information file (direct parser, the alternative to Soft Velocity)

Recover data in the MS Windows Clipboard

所有软件资源 100%安全 已检测 无病毒 无篡改
去预览

标签

Delphi VCL Components

Import documents from a Windows Address Book

Publish date from VCalendar/ICalendar

Open Office Documents

Import MS Outlook contacts, messages, notes and tasks and appointments, etc

Copy any info straight from another dataset

Now Christmas is around the corner that I only wish to remind you the Rubik's Cube is the ideal present for any event that could be readily solved using the online tutorial.
