# AutoSQL v1.3.2.0

2025-01-06 23:28:14

AutoSQL is described to be a simple and easy-to-use query automation instrument which is present for the user and developer and it has the ability to help in order to scheduled question as well as export it to the file of Excel or even the CSV and also to deliver results to the user and developer by email. All the databases in this case that are capable of supporting the connection of the ODBC are capable of employing with the auto SQL in different instances. The process of assessing as well as resolving the user question of the SQL now can be saved in a shorter. Of time and this saves a lot of time and energy for the user. How frequently does the user run the same problem over and over again, saves the results to the Excel or even sends it by email to the individual that requires it. Most of the databases are capable of supporting the process of scheduling the questions but frequently it is not quite technical and the user requires an authorization which is specific. With the help of the auto SQL any user has the ability to program database query and also automate it back to the Excel and saves into the community or even sends it by email or an attachment.
