GemBox.Email v2026.5.100 (05 May 2026)

2026-05-18 09:53:50

GemBox.Email is a robust .NET component designed for seamless email management within .NET applications. With support for multiple file formats such as MSG, EML, MHTML, and MBOX, developers can efficiently handle various email operations including reading, writing, sending, and receiving. Its versatility extends to supporting multiple protocols like IMAP, POP, SMTP, and EWS, enabling diverse functionalities for email management.

Operating independently of Outlook, **GemBox.Email** offers 100% managed code (C#) and adheres strictly to .NET class library design guidelines. This ensures compatibility across a wide range of platforms including .NET, .NET Core, .NET Framework, Mono, and Xamarin. The component boasts impressive performance, capable of processing large volumes of emails swiftly, with features covering all aspects of email management such as editing attachments, and headers, and validating email addresses.

provides developers with a reliable and efficient solution for email management tasks. Its simplicity of use and seamless integration with .NET makes it an ideal choice for applications requiring email functionality. Moreover, requiring only .NET for deployment, **GemBox.Email** simplifies the deployment process, eliminating the need for additional licenses and ensuring hassle-free application deployment.

Key Features of **GemBox.Email**:

1. Multiple File Formats: MSG, EML, MHTML, MBOX
2. Multiple Protocols: IMAP, POP, SMTP, EWS
3. Standalone .NET Component: Independent of Outlook, 100% managed code (C#)

所有软件资源 100%安全 已检测 无病毒 无篡改
