DevExpress CodeRush v25.2.4 (26 Feb 2026)

DevExpress CodeRush stands at the forefront of modern software development tools, offering robust features to boost developer productivity and streamline coding. As an integrated development environment (IDE) plugin for Visual Studio, CodeRush introduces innovative coding aids, refactorings, and productivity enhancements to help developers write code faster, cleaner, and more efficiently. With a focus on code quality, readability, and the acceleration of everyday development tasks, CodeRush is an invaluable companion for developers seeking to elevate their coding experience within the Visual Studio environment.

One of the standout features of **CodeRush** is its CodeRush Classic Code Analysis. This real-time code analysis engine provides instant feedback on code quality, potential issues, and opportunities for improvement. This feature assists developers in adhering to best practices and coding standards, promoting the creation of robust and maintainable code. CodeRush also introduces intelligent code completion, enhancing the coding experience by predicting and suggesting code snippets, reducing the need for manual typing, and minimizing errors.

CodeRush's refactorings and code generation capabilities contribute significantly to its appeal. With many refactorings and code templates, developers can effortlessly transform and optimize their code. From extracting methods and properties to introducing design patterns, **DevExpress CodeRush** simplifies the refactoring process, making it an efficient tool for code restructuring. The code generation features enable developers to create boilerplate code quickly, reducing repetitive tasks and accelerating the coding workflow.

The Visualize feature in **DevExpress CodeRush** provides developers with interactive visual representations of their code, offering insights into complex code structures and relationships. This feature aids in code comprehension, debugging, and troubleshooting, ultimately enhancing the overall development experience. Additionally, CodeRush includes a set of intelligent code providers that offer suggestions and automate common coding patterns, further boosting efficiency and reducing the cognitive load on developers.

In conclusion, is a dynamic and indispensable tool for Visual Studio developers striving for increased productivity and code quality. By seamlessly integrating into the development environment and offering robust features, CodeRush accelerates

coding tasks and promotes better coding practices and code readability. As a result, developers can focus more on creating innovative solutions and less on the intricacies of manual coding, making CodeRush a valuable asset in the toolkit of any Visual Studio developer.

Key Features of DevExpress CodeRush:

- Code Analysis:**
 - Real-time code analysis engine for instant feedback on code quality.
 - Identifies potential issues, suggests improvements, and enforces coding standards.
- CodeRush Classic Code Analysis:**
 - Analyzes code as it is written to ensure adherence to best practices.
 - Provides immediate feedback on code quality and potential improvements.
- Intelligent Code Completion:**
 - Predictive code completion for faster and more accurate coding.
 - Reduces manual typing and helps minimize errors.
- Refactorings:**
 - A comprehensive set of refactorings for code restructuring and optimization.
 - Includes method extraction, property extraction, and design pattern introduction.
- Code Generation:**
 - Code templates and snippets for rapid code generation.
 - Accelerates the creation of boilerplate code and reduces repetitive tasks.
- Visualize:**
 - Visual representation of code structures and relationships.
 - Enhances code comprehension, debugging, and troubleshooting.
- Intelligent Code Providers:**
 - Code providers that offer suggestions and automate common coding patterns.
 - Boosts efficiency and reduces the cognitive load on developers.
- Code Metrics:**
 - Measurement and analysis of code metrics for assessing code complexity and maintainability.
 - Provides insights into code quality and potential areas for improvement.
- Test Runner:**
 - We integrated a test runner for running and debugging unit tests.
 - Streamlines the testing process within the Visual Studio environment.
- Code Templates:**
 - Extensive library of code templates for various programming languages.
 - Facilitates quick and consistent code creation.
- Smart Duplicate Line/Block:**
 - Intelligent duplication of code lines or blocks with minimal manual input.
 - Improves code replication efficiency.
- Navigation Features:**
 - We have advanced navigation features for quick movement within the code.
 - Jump to definitions, find references, and navigate between files effortlessly.
- Code Formatting:**
 - Code formatting options to maintain a consistent code style.
 - Customizable formatting rules to align with project or team standards.
- Documentation Generation:**
 - Automatic generation of code documentation.
 - Simplifies the process of creating and maintaining inline code documentation.
- Integration with Visual Studio:**
 - Seamless integration with Visual Studio IDE.
 - Enhances the Visual Studio environment with additional productivity features.
- Customizable Shortcuts:**
 - User-configurable keyboard shortcuts for personalized coding workflows.
 - Increases flexibility and accommodates individual developer preferences.
