Devart dbForge Data Compare for PostgreSQL v4.1.839 (17 Jan 2024)

2024-12-28 23:40:59

Devart dbForge Data Compare for PostgreSQL is a user-friendly GUI tool that streamlines table data comparison and synchronization in PostgreSQL databases. This tool efficiently detects data differences, enabling secure deployment of changes and generating PostgreSQL data synchronization scripts for seamless syncing. It provides a quick solution, saving time and ensuring secure data management.

Key features include time-saving comparison and synchronization, data copy, history maintenance, data restoration, and compatibility with PostgreSQL versions 9.5 to 15 and Amazon Redshift. The tool simplifies the database comparison process through an intuitive Data Comparison wizard, supporting partial data sync and presenting differences in a user-friendly UI. It offers a comprehensive solution for efficient PostgreSQL database synchronization with automatic object mapping and custom query comparison.

In summary, is a versatile tool that empowers users to efficiently manage PostgreSQL data, save time, and ensure accurate synchronization in diverse environments.

Key Features of **Devart dbForge Data Compare for PostgreSQL** :

1. Generate PostgreSQL data synchronization scripts for secure and seamless syncing.
2. Save time by efficiently detecting and managing data differences.
3. Copy lookup data between development databases and maintain an accurate history of records.
4. Fix issues by restoring missing or damaged data to individual rows.
5. Automate synchronization tasks using a convenient command-line interface.
6. Compatible with PostgreSQL versions 9.5 to 15 and Amazon Redshift, enabling secure deployment.
7. Selectively synchronize data with options for script generation.
