Binary Fortress LogFusion Pro v7.2 for Win

2026-08-14 10:15:49

LogFusion can be a durable real-time log monitoring software designed for developers and system administrators! Make your own highlighting rules, filters, and more. You can also connect your LogFusion settings between different computers.

Monitoring the performance of your applications via log files could require you to manage several files and continuously examine them for changes.

It is good that you can rely on specific software, like LogFusion, to keep all the documents listed above without repeating actions.

The program has a simple layout without flashy buttons or high-contrast colors, which helps you stay focused on the task.

A standard configuration window exists to adjust specific parameters based on your preferences.

You may use advanced computer knowledge to fully use this feature because it does not provide an integrated help guide.

LogFusion lets you keep track of different logs, as it can support many different formats. You can import files from your computer or choose one of the items from a list of different types of logs.

You can, for instance, see hardware, application security, or system events by selecting the appropriate option on the Open Another menu. Furthermore, this program keeps track of the files you have recently visited and shows them in a list, making it possible to access them when you need to quickly.

You can choose multiple rows from the document and save them to a CSV file that you can save to your computer. Furthermore, saving the whole document's number of rows is feasible by selecting the appropriate option in the menu.

This program allows you to filter content by typing your preferred keywords in the specified field. In response, the application will only display rows with the tag you specified.

To summarize, LogFusion is a lightweight and reliable application that allows you to monitor log files in real time by offering a variety of valuable features. But, as LogFusion does not come with an integrated user guide, you must meet specific PC requirements for it to function correctly.

Binary Fortress LogFusion Pro Great Features:

Use LogFusion's powerful custom highlighter to find text strings that match regex patterns and then format the lines of the log matched to meet your requirements.

Utilize the LogFusion Advanced Text Filtering to filter and remove lines that do not correspond to your search terms, All in real time when new lines are added. More complex queries let you effectively narrow your results.

LogFusion can automatically add new logs created from Watched Folders. Select the folders to be watched, and LogFusion will open new log files created in these folders.

Make Log Categories to set up default log configurations, including highlighting and custom columns. Log Categories help you save time and makes setting the logs that have been loaded easy.

Make custom definitions for columns, and allow LogFusion to analyze and break up these loglines into custom columns for a more efficient reading.

LogFusion Pro can sync your highlights rules online, allowing them to be loaded and changed from any computer you're logged in to.

Applications Tools

Like the 'tail' software on Linux/Unix, you could use LogFusion to display the most recent entries in a log in real-time.

LogFusion can read all text log files, including server and application debug logs. You can also access remote and local Windows Event Logs and Event Channels and capture the text of OutputDebugString function calls to make it easy to debug your application.

The scrollbar in LogFusion displays the indicators for highlighted lines within the log file. This makes it much easier to find lines that meet your rules for highlighting, particularly when you have large log files.
