Defining Ui Colour Palette by Max Karacun: In this tutorial, I'll guide you through the step-by-step procedure for selecting the UI colors for a mobile or web-based application. At the end of this class, you can establish the UI color palette that will help your product appear visually appealing and professionally created.

This course is designed for entrepreneurs, developers, designers, or anyone who has to choose colors to design a digital product. You don't require any previous design experience to be enrolled in this course.

This isn't an uninteresting color theory course. The course is short and straight to the point, removing all unnecessary fluff. The lessons are practical and brimming with real-world examples. I will use an app for hiking called Epictrails to provide an example to show the method of creating UI colors in an actual project to allow you to follow along and replicate this process to create your product.

What you'll learn?

- The fundamentals of a great color palette
- Understand and break down the various types of colors needed for the UI
- How can you make sure that your colors are available
- Aid you in defining the brand's persona
- How do you select colors that are in tune with your brand's persona
- Designing a professional and comprehensive color palette for the UI
- Learn to apply color to the UI
- Instruments and other resources that help you determine the colors for your palette.
