Winsoft Audio Component Suite for FireMonkey v1.5 for Delphi & CB XE7-12 Athens Full Source

2024-12-18 23:02:00

The comprises components designed for Delphi and C++ Builder, facilitating the playback and recording of waveform audio. Utilizing the standard Windows Waveform Audio API, this suite supports raw PCM audio data and PCM WAV files. Compatible with Delphi/C++ Builder XE7 - 12 FireMonkey applications and supporting Windows 32-bit and 64-bit systems, this suite offers comprehensive audio functionality. The registered version includes access to the source code, ensuring customization possibilities, and allows for royalty-free distribution of applications.

Key Features of **Winsoft Audio Component Suite for FireMonkey**:

1. **Utilizes Windows Waveform Audio API:** Implements the standard Windows Waveform Audio API for seamless audio integration within applications.
2. **Versatile Audio Format Support:** Extensively supports raw PCM audio data and PCM WAV files, providing flexibility for diverse audio format requirements.
3. **Compatibility with FireMonkey Applications:** Tailored to seamlessly support Delphi/C++ Builder XE7 - 12 FireMonkey applications, ensuring smooth integration with the latest FireMonkey frameworks.
4. **Cross-Platform Compatibility:** Compatible with Windows 32-bit and 64-bit systems, offering a consistent audio solution across various Windows platforms.
5. **Access to Source Code:** Includes source code in the registered version, allowing developers to customize and adapt audio components.
6. **Royalty-Free Distribution:** Allows for the royalty-free distribution of applications, allowing developers to distribute audio-enabled applications without additional costs.
