Devart dbForge Data Pump for SQL Server v2026.1.39 (15 May 2026)

2026-06-02 12:08:49

is a dynamic SSMS add-in engineered to streamline the transfer of data and metadata between databases. This tool expedites the import and export process with unparalleled efficiency by seamlessly bridging external sources with SQL databases. Offering compatibility with over 10 popular data formats including Excel, CSV, XML, and JSON, Data Pump empowers users to effortlessly migrate data between systems, bolstering productivity and accelerating results.

With **Devart dbForge Data Pump for SQL Server**, users can import from and export to 10 of the most widely used data formats, including Excel, CSV, XML, JSON, and more, providing unparalleled flexibility and versatility. Whether repopulating tables or appending data, the tool's advanced options and customizable templates cater to diverse scenarios, ensuring seamless data migration with precision and ease.

Moreover, **Devart dbForge Data Pump for SQL Server** goes beyond mere data transfer, enabling users to dump table data into single or multiple SQL files and utilize a command-line interface (CLI) for scheduling and automating export and import tasks. By supporting many file formats and offering comprehensive automation capabilities, **Devart dbForge Data Pump for SQL Server** emerges as an indispensable solution for accelerating data management processes in SQL Server environments.

Key Features of **Devart dbForge Data Pump for SQL Server** :

1. Import data from the 10 most popular data formats
2. Export data to 14 widely used data formats
3. Migrate data from third-party databases to SQL Server
4. Repopulate or append data to database tables
5. Dump table data to one or multiple SQL files
