Kellerman Software Ninja WinRT Database v1.06 (27 Jun 2013) Retail

2024-12-18 23:02:30

Ninja WinRT Database is described to be a deadly good database which is fast, and very compact. It has known to be compatible with the processor of the WinRT including the ARM, x64 and x86 for the process of running on the Microsoft Surface as well as the notebook, tablet and the Windows 8 devices. All the methods are being as asynchronous as well as its specification. It has the ability to be used as a Window Phone 8 database for the users. The user has the ability to choose as to how to save the child object which is embedded or in a separate table. It has the ability to support on the features that the user expects. Identifying of the primary case as well as the foreign key relationship is possible. It has the ability to support all the features that the user desires and the ninja database has the ability to save the complex structure of the data such as the double linked list as well as the multi-dimensional array along with the dictionaries. The databases can be created in the memory or event can be isolated in the storage by the user. It has the ability to be purchased separately.

Kellerman Software Ninja WinRT Database Great Features:

It has the following features and attributes that are stated as below such as:

- It is very easy to use and has zero configuration. The user has the ability to open the database and the database can automatically be created. It has the ability to save a lot of time as well as the object along with the table which is automatically created and the user object is being saved as well. The indexes are automatically maintained here and the classes do not require any implementation at any interface or even a base class. The demo of WinRT example which has been included.
- Whenever any problem occurs while the process of saving a record is going on it has the ability to automatically roll back. The ninja has the ability to automatically detect the corrupted databases and also it can repair them. It permits the user to make the application worry free for the user.
- Ninja WinRT Database was basically developed with the test driven development process. It has over 560 unit of test as well as 90% of the coverage of code. The features that are separating ninja database from all the other databases that is present is the advanced Dynamic Schema Evolution that it has. The process of inserting the property as well as deleting them or even changing the property type in the user classes is considered to be automatically handled. The types of the changes are capable of breaking most of the object databases.
- The process of encryption with the build industry as well as the standard of the encryption AES. It has the ability to be overridden with the user's own software or even the hardware which is based on the encryption process.
- With the use of the binary serialization instead of the XML serialization it has the ability to make a big difference in the size of the database which belongs to .NET. The ninja database saves all the record in a single index file as well as a data file. A lot of other object databases are capable of saving each record as a separate file which has the ability to waste the space of the disc.
- Indexes are being cashed here as well as the object that are being cashed and expired with the use of the LRU. The size of the cash as well as the expiration timeout are very configurable. It has the ability to support the Isdirty and also increase the application speed.
- It has the ability to accelerate the user project by the process of writing less code. For example, a lot of databases require different lines of code in order to create an auto increment primary key for the user and the developer. The ninja database requires no code of line and it is completely automatic for the users.
- It is considered to be a hundred percent manage code which is written in the language of C#.
- The user is capable of receiving a refund within the 60 days after the purchase if he is dissatisfied with the product.
- It is capable of providing a lifetime technical support via the email.
