TeraByte Drive Image Backup & Restore Suite offers a user-friendly and efficient comprehensive data backup and restoration solution. Compatible with various platforms such as VCL, FMX, LCL, and WEB core apps, it provides the flexibility to save backups to external drives, network drives, and optical media like CD, DVD, or BD. The suite includes essential components like Image for Windows, Image for Linux, Image for DOS, and the OSD Tool Suite.

TeraByte Drive Image Backup & Restore Suite supports backup of all hard drive data, programs, and operating systems, allowing users to create recovery boot disks easily. Utilizing Volume Shadow Copy Service (VSS) or PHYLock™ ensures uninterrupted computer usage during backups, eliminating inconsistencies associated with active partitions. TeraByte's drive image files are compatible across all products of the same major version, offering flexibility in restoring disk images with preferred components.

Key features include total reliability with byte verification, convenience with the ability to run directly from Windows, security through password protection or AES encryption, and the option to back up only changed data. The suite also provides a wizard-driven interface, various compression options, and support for optical drives. With large drive support, compatibility with diverse file systems, and robust network management capabilities, stands as a reliable and cost-effective solution for disk imaging needs.
