4D E-Payment Integrator v20.0 Build 8410 (03 Jan 2023) for All Platforms Retail

2024-12-27 00:36:37

Internet E-Commerce simplified. Components to support Credit Card and Electronic Check (ACH) processing through the most popular Internet payment gateways. The most solid E-Commerce components are trusted byby thousands of developers worldwide.

The most popular suite of E-Commerce components. E-Payment Integration is the simplesthtforward option to incorporatInternet payments intoyments to your application. E-Payment Integrator simplifies the process of integrating electronic payments by offering components that have an easy interface for processing the transactions of credit cards and eChecks. Developers are not required to master complex socket programming or implement security. Using the E-Payment Integration tool, developers can develop and target any currently supported payment gateway.

- Credit Card & eCheck Components

  Components to support Credit Card processing and e-Checks are all part of an extensive E-commerce suite.

- 256-bit Strong SSL Security

  Based on the IPWorks secure communication framework used with thousands of secured apps around the world.

- Uniform & Extensible Design

  Easy to use With a standard user interface, easy to use and flexible design. The standard component Interfaces for all platforms and platforms.

- Fully Integrated Components

  Native software components that work with any development technology, with no dependence on libraries from outside.

- Blazing Fast Performance

  It is built on an optimized asynchronous socket design, improved for over two decades.

4D E-Payment Integrator Great Features:

- Credit Card processing and eCheck support for every primary Internet Payment Gateway.
- Check21 electronic check image processing support.
- Secure data communications using up to 256-bit SSL encryption and Digital Certificates.
- Reliable high-volume transaction processing.
- A unified framework with a standard, easy-to-learn object model and simplified interfaces enables you to do more.
- Address Verification Service (AVS) support.
- Credit Card validity checks decrease expenses from attempting to authorize invalid credit cards.
- Components are thread-safe on critical members. Fast, robust, reliable components that consume minimal resources.
- Native development components for all supported platforms and technologies.
- Full support for mobile development.
- It is a rigorously tested, rock-solid library that have undergone hundreds of thousands of hours of testing internally by our QA team and externally through customer installations.
- Detailed reference documentation, sample applications, fully-indexed help files, and an extensive online knowledge base.
- This is backed by multi-tier professional support, including free email and enterprise-level paid support.
