IronXL.Excel for .Net v2026.2.1 (17 Feb 2026)

2026-04-24 12:10:30

IronXL is a powerful C# Excel library for .NET applications, providing a user-friendly API that eliminates the need for Microsoft Office or Excel Interop installations. It supports various formats like XLS, XLSX, CSV, and TSV, making it versatile in reading, editing, and creating spreadsheets across different platforms, including Microsoft Windows, macOS, Linux, Docker, Azure, and AWS.

Designed for compatibility with C#, F#, and VB.NET on .NET 8, 7, 6, 5, Core, Standard, and Framework, **IronXL** simplifies Excel-related tasks without the complexities of Office Interop. It offers a comprehensive feature set, from workbook creation and metadata editing to worksheet manipulation, chart creation, and cell styling. Developers can seamlessly integrate Excel functionality into their applications, enhancing efficiency and accuracy.

IronXL streamlines Excel tasks with a commitment to accuracy, ease of use, and speed. Whether working on desktop or cloud-based projects, developers can leverage to handle a wide range of Excel document operations without the hassle of traditional Office Interop dependencies.

Key Features of **IronXL**:

1. Read, edit, and create spreadsheets in XLS, XLSX, XSLT, XLSM, CSV, and TSV formats.
2. Cross-platform support for C#, F#, and VB.NET on .NET 8, 7, 6, 5, Core, Standard, and Framework.
3. No need for Microsoft Office or Excel Interop installations.
4. Compatibility with various platforms, including Microsoft Windows, macOS, Linux, Docker, Azure, and AWS.
5. Seamless integration into Console, Web, and Desktop applications.
6. Import and export data as DataSet or DataTable.
7. Metadata editing, permissions, and password management.
